Claims 1 to 3

Documents 1 to 3 describe a technology that executes a periodic DMA transmission in divided bursts and transmits other data during the periods when the DMA transmission is interrupted. Conducting DMA transmission is common practice in image processing devices and one skilled in the art could have easily arrived at the arrangement described in the claims.

Claim 4

Document 4 describes a line detection means. One skilled in the art could have easily arrived at an arrangement in which each line is detected during data transmission.

Claims 5 and 6

Documents 5 and 6 describe a technology that temporarily saves data when the transmission is interrupted. Documents 7 and 8 describe a technology that reserves the next data transmission during a transmission.

Claims 7 and 8

Document 9 describes a technology that controls so as not to acknowledge the same class of access successively. One skilled in the art could have easily arrived at an arrangement in which the class of data is determined and data other than a specific class of data is transmitted.

Claim 9

Documents 10 and 11 describe a bus system provided with a memory means that stores priority information in such a manner that the information can be rewritten.
